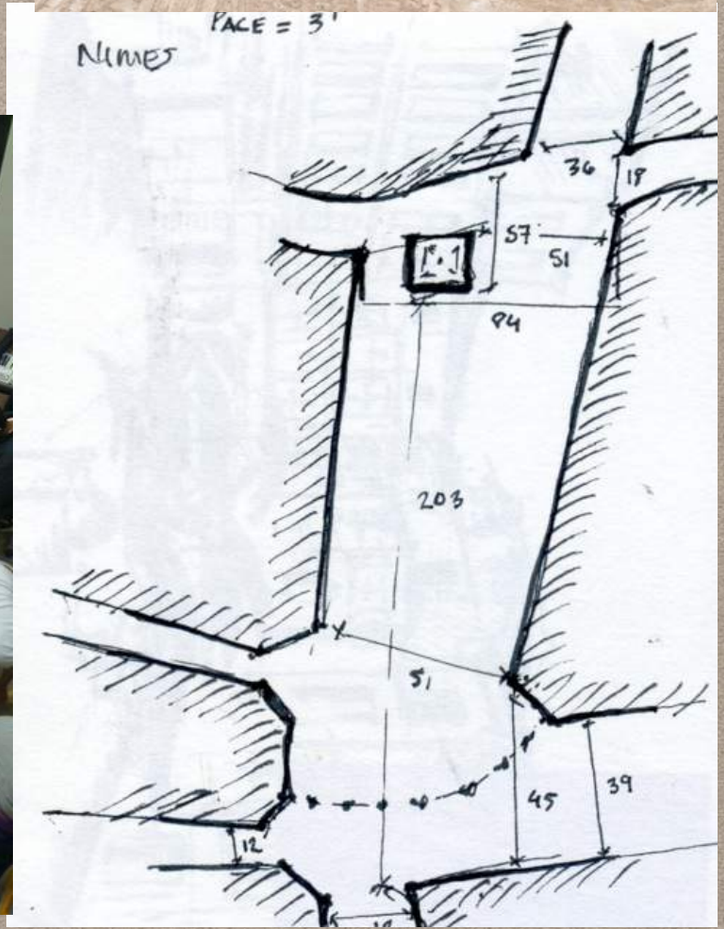
COASTAL COMMUNITY DESIGN COLLABORATIVE

ADAPTATION STRATEGIES AT THE DISTRICT SCALE

HAMPTON UNIVERSITY
ARCHITECTURE



Hampton University Departments of Architecture and Marine and Environmental Science
Old Dominion University Departments of Civil and Environmental Engineering and Engineering Technology
Community groups
“Cloud” of Academic and Professional Advisors
Itinerant Participation: James Madison Engineering, William & Mary Coastal Policy Center, Norfolk State Engineering

Now offering Concentration in Adaptation to Sea Level Rise
By 2019 Certificate in Adaptation to Sea Level Rise

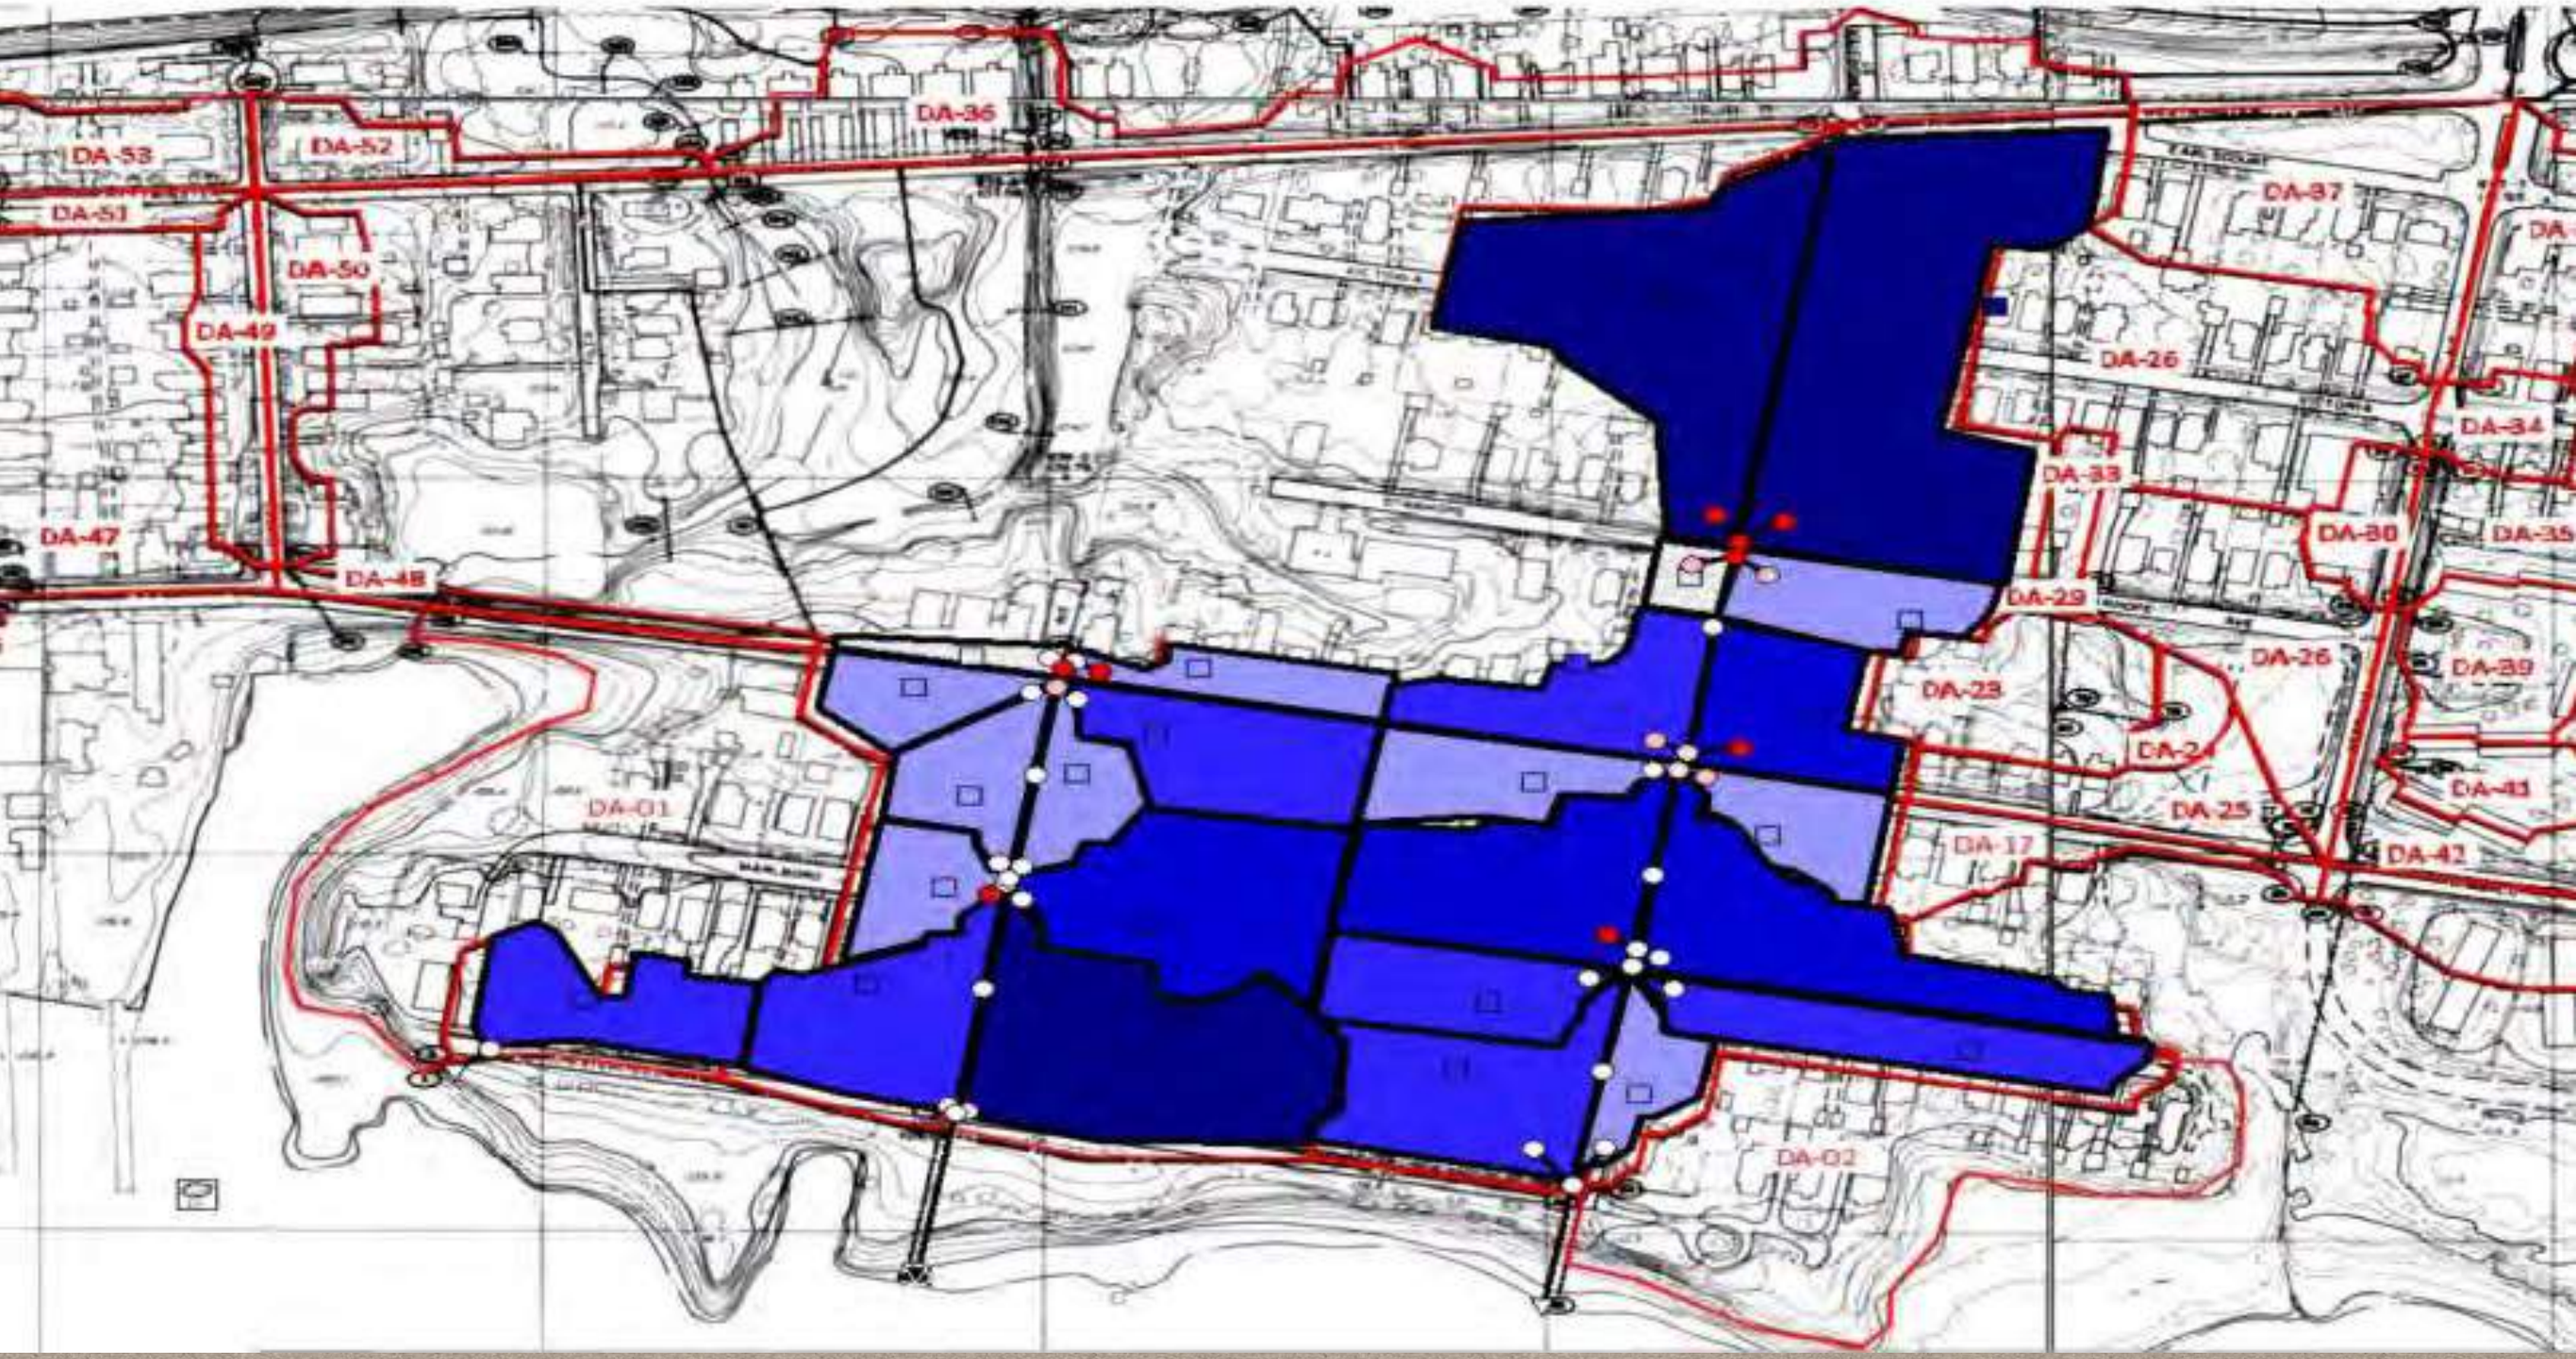
CHESTERFIELD HEIGHTS

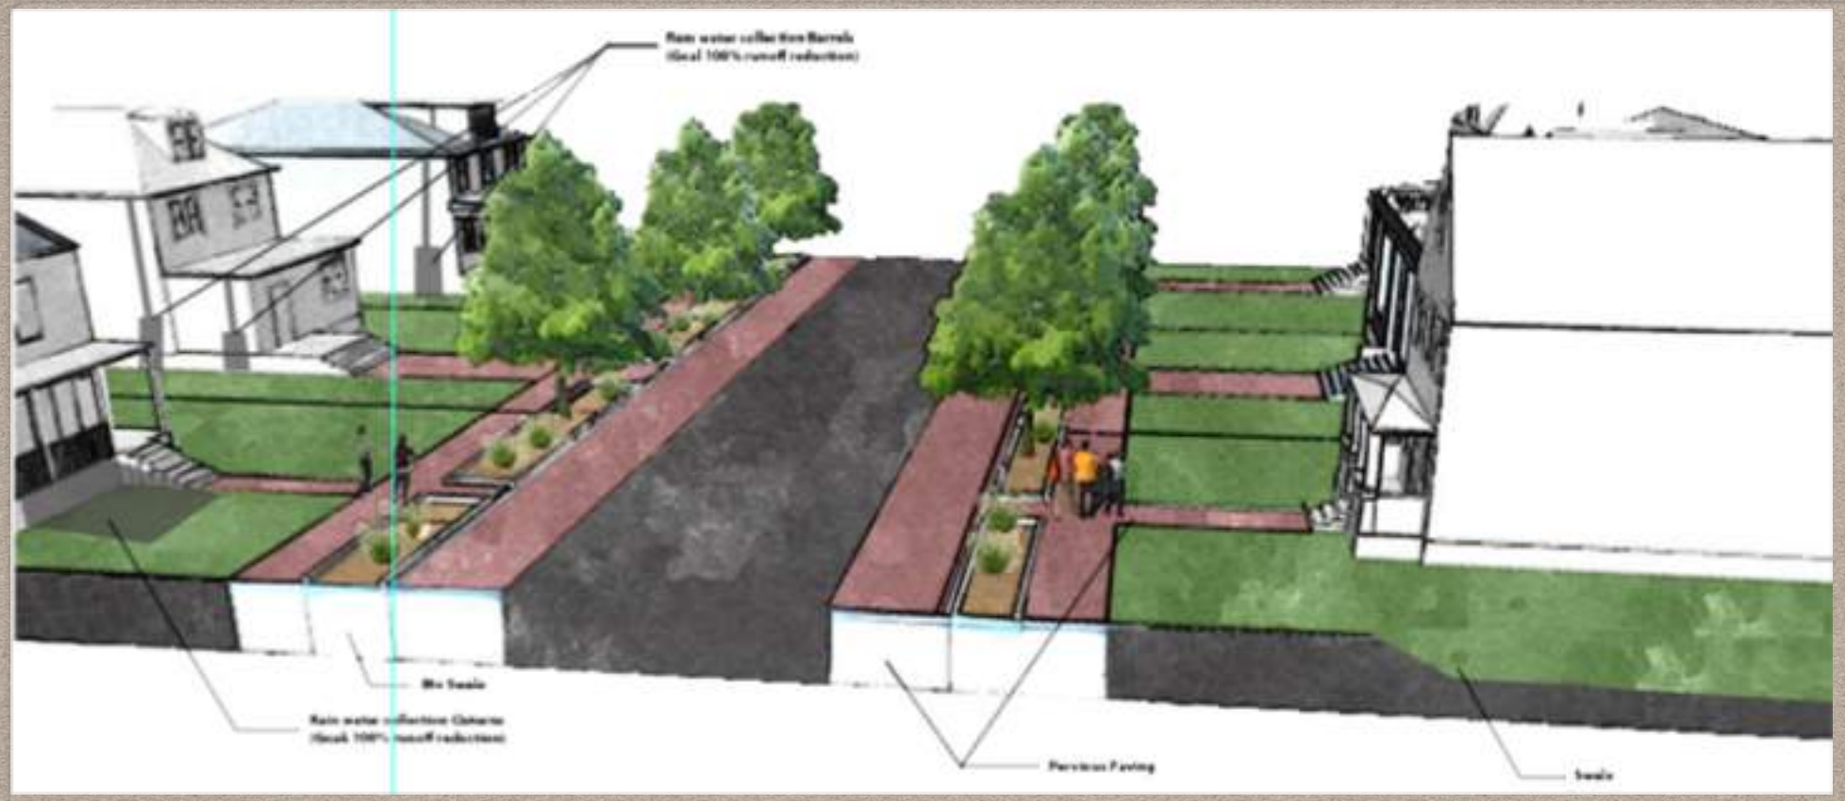


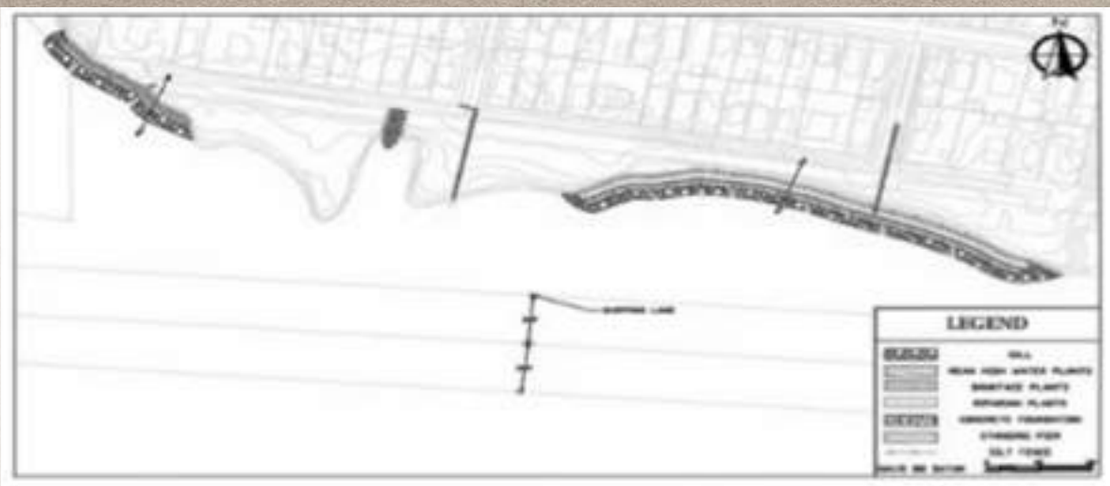
BARRIERS

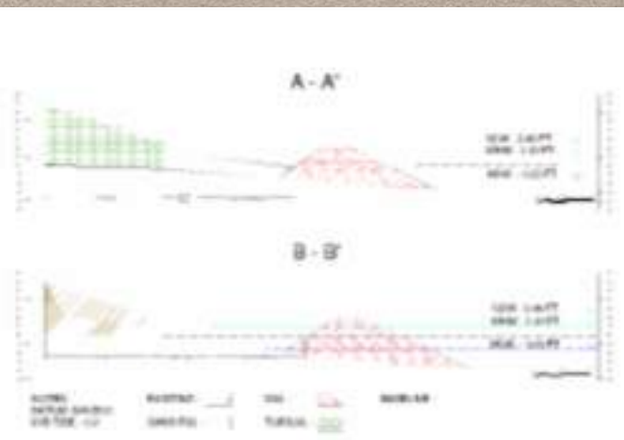
- TIDAL CHECK VALVES ON STORMWATER OUTFALLS (2)
- LIVING SHORELINE
- RAISED ROAD WITH TIDE GATE AT WETLAND AREA

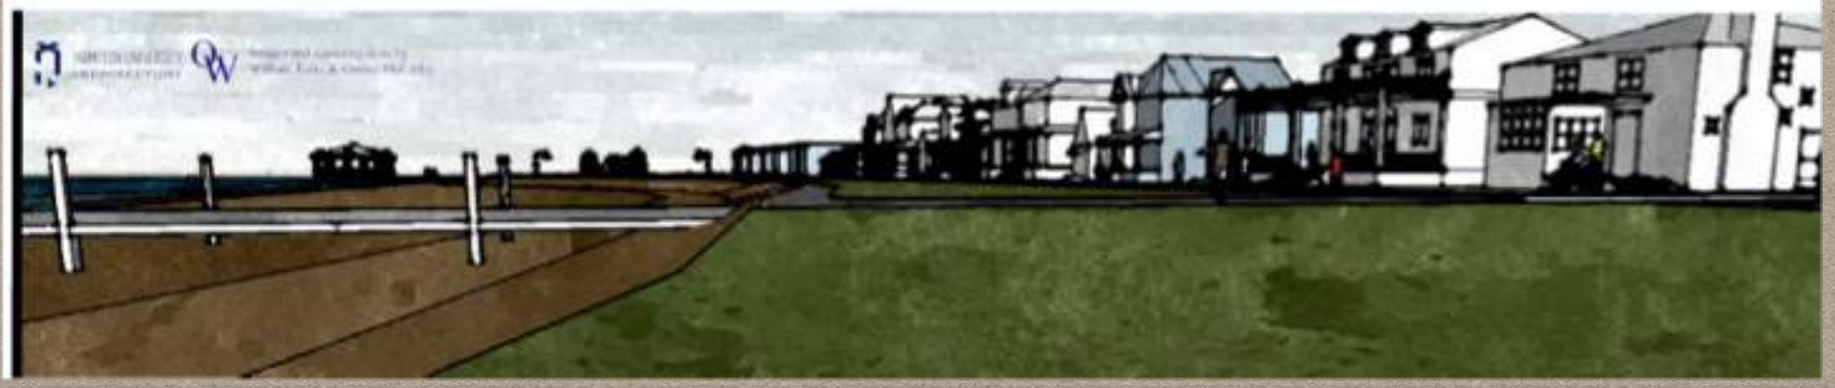
SPONGES

- PERMEABLE PAVEMENT AT SIDEWALKS AND PARKING ZONE OF ROADWAY OVER CISTERNS
- BIO-RETENTION IN VERGES
- ROOFTOP DISCONNECTION PROGRAM
- TIDE GATE AT WETLAND AREA









GUIDING PRINCIPLES

- LEAVE PEOPLE, BUILDINGS, & UTILITIES IN PLACE
- MANAGE WATER AS A DISTRICT NETWORK
- PREFERENCE FOR LOW IMPACT DEVICES
- OVER PIPE & PUMP
- INITIATE COMMUNITY NETWORK IN WHICH ALL SCALES HAVE PART TO PLAY
- STREET BY STREET, BLOCK BY BLOCK, PARCEL BY PARCEL

DUTCH DIALOGUES VIRGINIA:LIFE AT SEA LEVEL JUNE 2015

National Disaster Resilience Competition

GHENT: THE HAGUE

- National Register of Historic Places listed district
- Developed in 1890s to 1920s
- Public waterfront park and other open garden areas
- Between riverine estuary, medical center, arts district, and downtown.
- Failing bulkhead
- Significant flooding

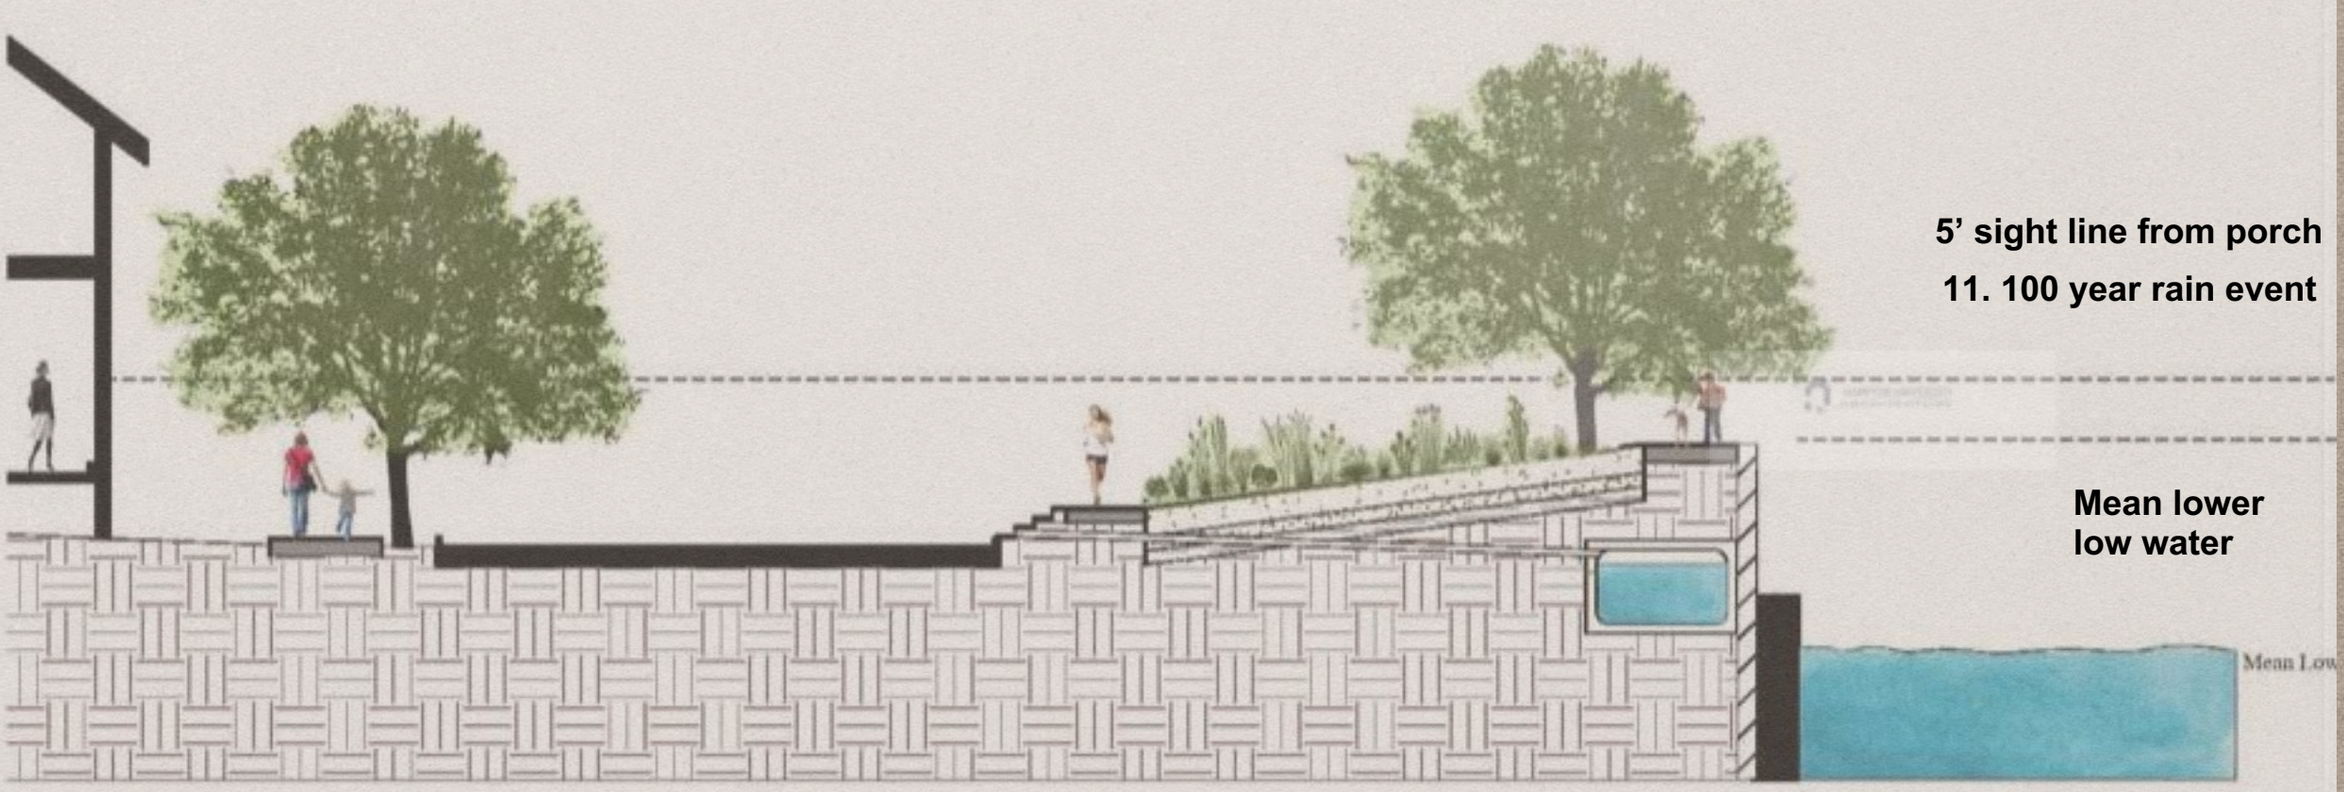
PROPOSAL 1: OUTFALL BARRIER

TIDAL CHECK VALVES

SWMM MODEL

NODES

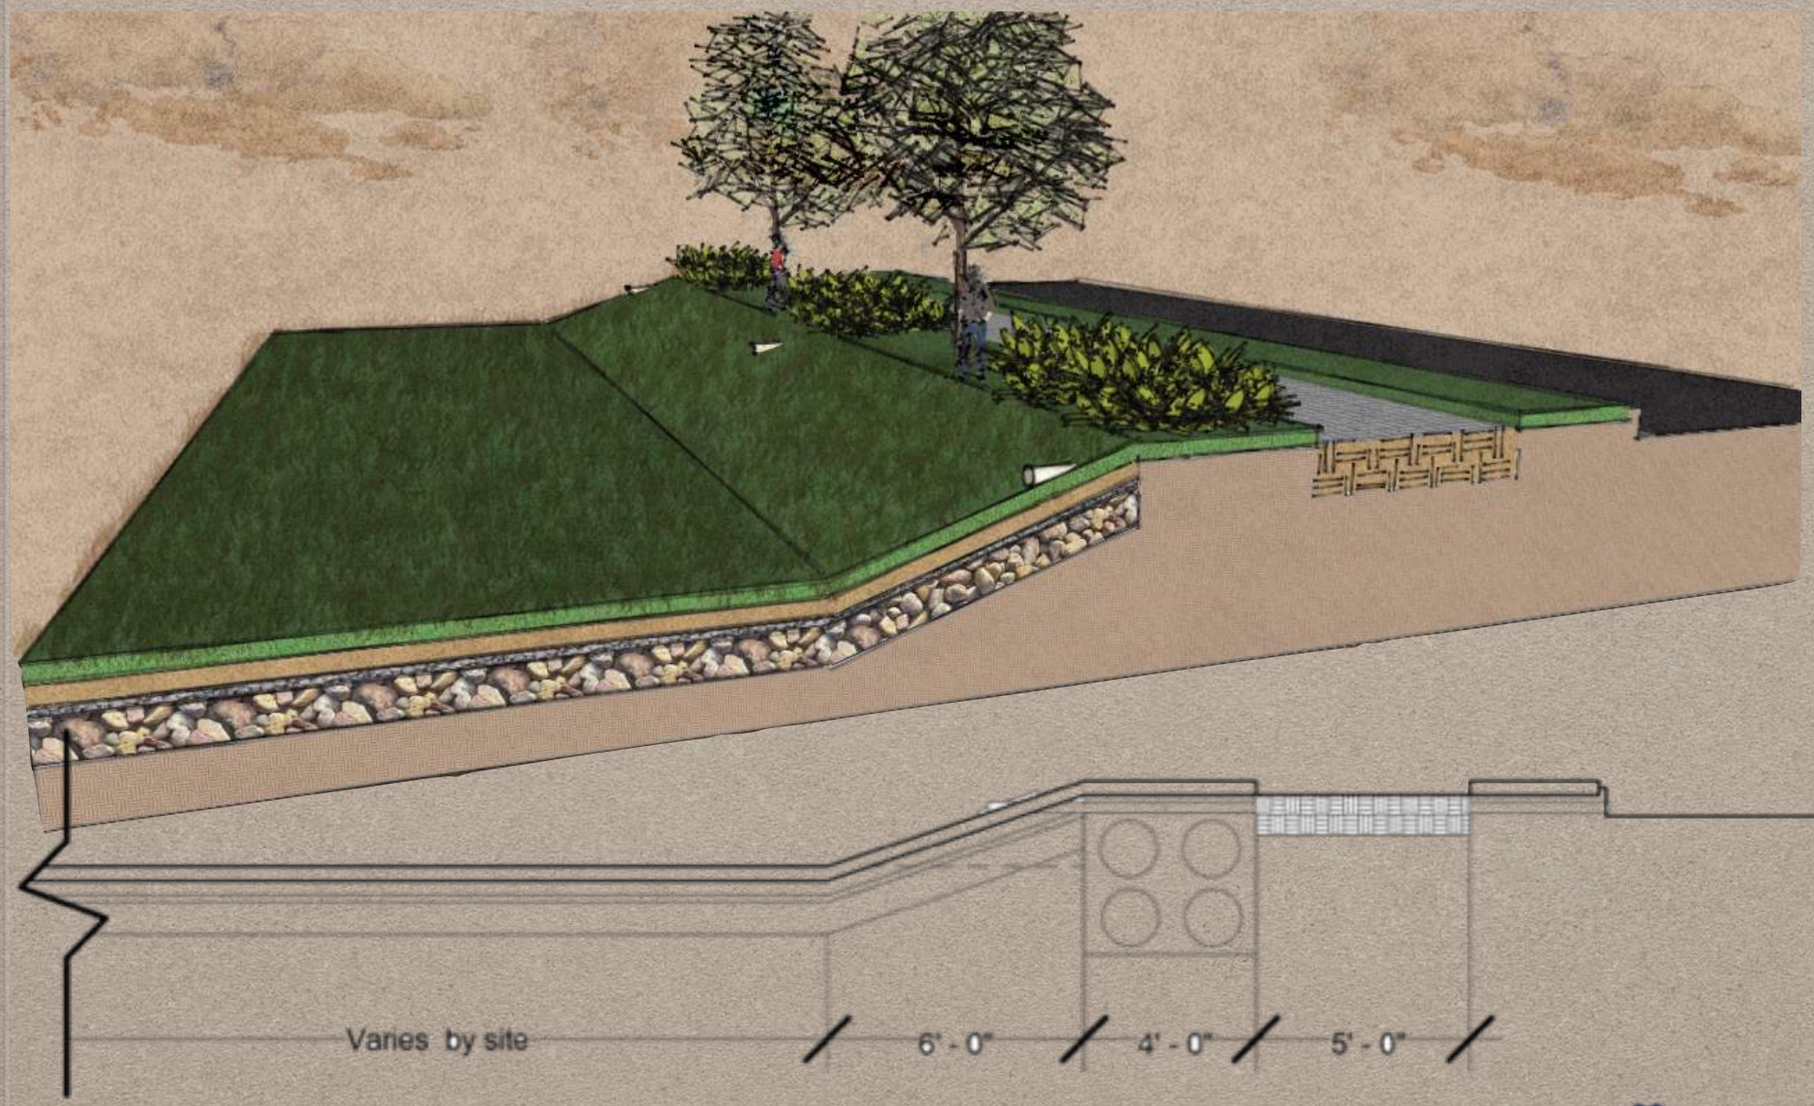
PROPOSAL 2: PERIMETER BASIN WALL

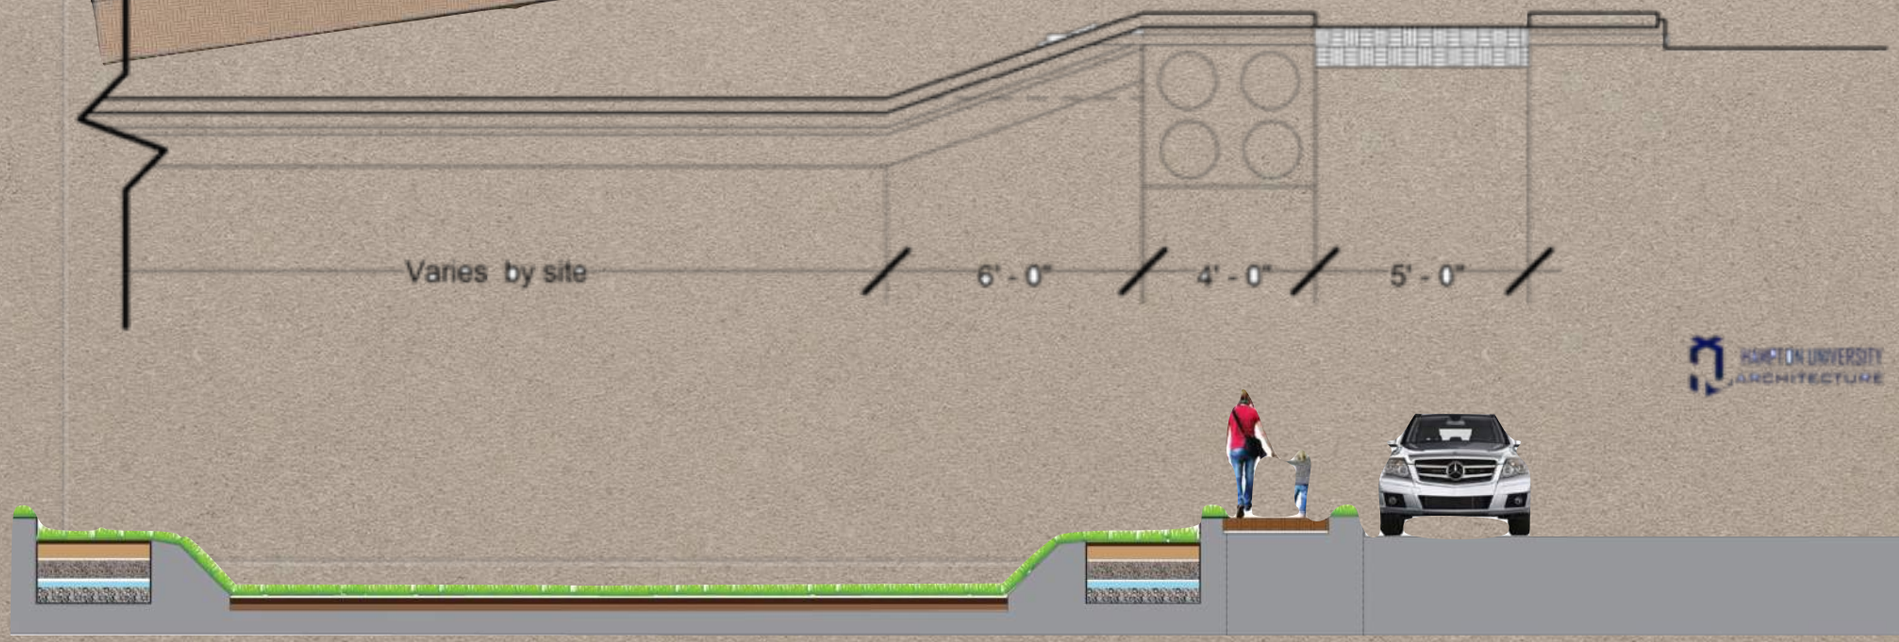


SPONGES: LARGER BASINS

STOCKLEY GARDENS AND OLNEY DRY SWALES

4,421,000 gallons





SPONGES: LARGER BASINS

EVMS/LEIGH HOSPITAL WALLED RAIN GARDEN COMBINES DRY SWALE WITH ABOVE GROUND STORAGE

2,845,242 gallons

L.I.D. STREET-SCAPE STRATEGY

- PERVIOUS PAVING FOR SIDEWALKS AND 6′ PARKING WITHIN CARTWAY
- BIO-RETENTION VERGE
- EXISTING TREES PRESERVED FOR USEFUL LIFETIME; TREEWELLS WITHIN PARKING ZONE PLANTED UNTIL SERVICE FOR REPLACEMENT TREES.
- PERVIOUS PLANTING AREAS WILL REDUCE SIDEWALK HEAVE FROM ROOT SYSTEMS.
- GRANITE CURBING CUT FOR INFLOWS

As shown c. 42,000 gallons

HUNTERSVILLE

NEIGHBORHOOD OF THE FUTURE

EXISTING CONDITIONS

- sand/silt;groundwater 6-8′
- legacy creek bed
- retrofit/undersized/absent storm water lines
- flooding @ low points
- disjunctions in connectivity
- high social capital
